

Woodworking Class

- Greet the teacher and classmates who are working close by, using the student's method of "greetings" and/or the voice output device.
- Connect a hand held drill to the PowerLink. Use the switch to run the drill so classmates work together to make a project.
- Use the Powerlink and switch to run a palm sander.
- Provide instructions for working with tools.
- Use the Step-by-Step Communicator to provide feedback to classmates about their projects. (e.g., cool; that looks sweet! I like the colours you used.)
- Provide a question to the class about their project using the Step-by-Step Communicator.
- Have the teacher record reminders about safety or when the project is due to be completed, on the Step-by-Step Communicator.
