

## Improving Intelligibility of Speech Data Collection Form

<b>Obtaining a Baseline</b>
Gather 10 pictures/objects that you know your student knows the name of
Have your student pick one, but close your eyes so you can't see what he/she has picked
Ask your student to tell you what he/she has picked
Record whether or not you could understand your student
Carry this procedure out over 3 successive days
Keep the pictures/objects to use when carrying out intelligibility checks later on
Start the speech therapy that your speech therapist has recommended

<b>Measuring Progress by Taking Probes</b>
In about a month after starting this procedure, take another probe
Use the 10 pictures/objects that you used before in the baseline measurement
Same procedure as in baseline
Take probes monthly
